

**Acetaminophen (paracetamol)** measurements are used as an aid to diagnose **acetaminophen overdose**.

METHOD: ENZYMATIC (ACYL AMIDOHYDROLASE); ENDPOINT

**FEATURES:**

FOR THE QUANTITATIVE MEASUREMENT OF ACETAMINOPHEN

# Genzyme Acetaminophen-SL Reagent

Genzyme's Acetaminophen-SL reagent uses a spectrophotometric method that is rapid, reliable, convenient and specific for acetaminophen. It is intended for use with serum and plasma.

- ✓ Two part stable liquid
- ✓ A single level liquid acetaminophen calibrator is included in the kit
- ✓ Suitable for use with serum and lithium heparin plasma

**BENEFITS:**

- ✓ Easy to use, no additional reagent preparation required
- ✓ Convenient and cost effective
- ✓ Flexible sample types to meet different laboratory needs
